Apache 2.4 VS18 Windows Binaries and Modules

Apache Lounge has provided up-to-date Windows binaries and regular third-party modules for more than 15 years. We have hundreds of thousands of satisfied users: small and big companies as well as home users. Always build with up to date dependencies and latest compilers, and tested thorough. The binaries are referenced by the ASF, Microsoft, PHP etc. and more and more software is packaged with our binaries and modules.

The binaries, are built with the sources from ASF at <http://httpd.apache.org>, contains the latest patches and latest dependencies like zlib, openssl etc. which makes the downloads here mostly more actual then downloads from other places. The binaries **do not run** on XP, 7 SP1 and 2003. Runs on Vista SP2, 8/8.1, 10, 11 Server 2008 SP2 / R2 SP1, Server 2012 / R2, Server 2016/2019/2022/2025.

Build with the latest Windows Visual Studio C++ 2026 aka VS18. Has improvements, fixes and optimizations over VS17 in areas like Performance, Memory/Management, New standard conformance features, Code generation and Stability. For example code quality tuning and improvements done across different code generation areas for "speed". And makes more use of latest processors and supported Windows editions (win7 and up) internal features.

VS18 is backward compatible. That means, a /VS17/VS16/15/14 module can be used inside the VS18 binary.

Be sure you installed latest 14.51.36247 Visual C++ Redistributable Visual Studio 2017-2026 : [vc_redist_x64](#) or [vc_redist_x86](#) see [For all platforms](#)
