College Laboratory Documentation

Student Name: [Your Full Name]

Course and Section: [Your Course and Section]

This project uses standalone Apache 2.4, PHP 8.5.9, PostgreSQL 18, and pgAdmin 4. It does not use XAMPP, Laragon, WAMP, EasyPHP, Docker, or another bundled web-server package.

Installation and Verification

Apache URL: `http://localhost`

PHP version: `php -v`

PostgreSQL version: `psql --version`

Application URL: `http://localhost/login-system/public/`

Database: `lab_login`; table: `public.users`

The application demonstrates PHP sessions, PDO prepared statements, `password_hash()`, `password_verify()`, input validation, and error handling.

PostgreSQL Database

Users Table and Sample Records

The image shows the pgAdmin 4 interface. On the left, the Object Explorer shows the database structure. The 'public' schema is expanded, and the 'users' table is selected. The table's columns are listed: id (integer, primary key), username (character varying(50)), password (character varying(255)), and fullname (character varying(100)).

The main pane displays the 'Query' tab with the following SQL query:

```
SELECT * FROM public.users ORDER BY id ASC
```

The 'Data Output' tab shows the results of the query, displaying 3 rows. The data is as follows:

id	username	password	fullname
1	admin	\$2y\$12\$glt9C3inFsnmhwDCUmPHGvjegFPAGx.8CFieMb0AAVUXHO...	Admin User
2	jane	\$2y\$12\$0o5g772S5pHFxth.nfouuQQ3F9U6SHAUkuR/xSS0fEnLSx...	Jane Doe
3	banalo	\$2y\$12\$yruCNGPc9CmJLZhbUjeBuKxHLSp1RiWh0xeE2LSyYpIzgiPB...	Banalo

The status bar at the bottom indicates 'Total rows: 3' and 'Query complete 00:00:00.213'.
